Foxborough Board of Health
Swimming Pool Regulation-Bacteria Testing

As allowed under 105 CMR 435.21, all public and semi-public swimming pools, wading pools, spas, and special use pools shall have a bacteria test as specified under 105 CMR 435.28 for both coliform and pseudomonas aeruginosa within 15 days prior to permit issuance. An additional test shall be taken at an interval $\frac{1}{2}$ way through the projected season, but in no case shall the 2nd test be later than July 31st of the permit year. In addition to the bacteria test parameters, tests shall include measurement of water quality, to include, pH, chlorine residual, and alkalinity. Official results should be mailed to the Board of Health.

As soon as the operator obtains knowledge that the testing results are outside of allowable parameters, the pool operator must immediately close the pool and steps must be taken to return pool to safe operation. Notification of closure shall be made orally and followed up in writing including submittal of laboratory testing data, to the Foxborough Board of Health.

In the event of a closure due to bacteria presence in excess of allowable limits, the pool must remain closed until a test of the pool water indicates that it is within limits set by 105 CMR 435.28. Upon receipt by the Board of Health that test results indicates the bacteria is within allowable safe parameters, the Board of Health may allow re-opening of subject pool. A 2nd test for bacteria, and water quality must be taken within 14 days of reopening the pool. Pool may remain open and testing schedule may be resumed if bacteria and water quality are found to be within allowable safe limits under 105 CMR 435.28.

Requirements and testing frequency for bacteria and other parameters may be modified and requested at any time by the Board of Health as it deems necessary to ensure the public health and safety.

Adopted by the Board of Health on December 7, 2009.

Paul Steeves, Chairman

Paul A. Mullins, Clerk

Eric S. Arvedon, Member
